

未命名

1 level each act, 2 good, 3 great, not too many

types of puzzle are too many

ask q outside than answer the same question

how to resume the game progress without personal data

find a newer paper after LLM generation, out of psychology paper

IBM context not equal to social

trade-off of each paper, shows the critical think

RQ may need to change, because spend long time and it's about user experiment

if llm unavailable -> static hint(multiple choice to discuss with Lily)

test result -> test system system and design

chat-bot response evaluate -> check the answer is related with the act or the level, instead other things

outside of the act, ex: waiting scene or logging scene, players have more freedom to talk with Lily

next month submit report

every design based on thesis not imagination

office hours: Wednesday 1pm to 2pm

Games enforce practice that free LLM chat cannot

Leonardo Magela Cunha

Your research questions they like. Even all the effort that you will have to put in the game development, I think you don't need to go even further down because then it will take a lot of time.

Leonardo Magela Cunha

I think that if you stay at the level of, OK, I I have this concept

Leonardo Magela Cunha

↓ 移至目前

Leonardo Magela Cunha

And from these papers and from these concepts I derive it the requirements for my software.

Leonardo Magela Cunha

Have I implemented the requirements?

Leonardo Magela Cunha

Yes, I did.

Leonardo Magela Cunha

So I expect this to improve learning.

Leonardo Magela Cunha

Learning so you can do that as future work, you can just mention in your future work section that it would be nice to have.

Leonardo Magela Cunha

Have a user experiment.

Leonardo Magela Cunha

I think like you don't need to go deeper into into the agent to see if the agent will stay on topic or not

Yeah, yes, yes, this is it. And and because one of the things that you have that I really like about your approach is like you have the gains, you have a variety of types of games that are all connected to the content itself.

Leonardo Magela Cunha

So having that variety of.

Leonardo Magela Cunha

Games of types of games and and the connection.

Leonardo Magela Cunha

Of those types of games with the content itself from the NLP course

Leonardo Magela Cunha

Another game and you are responsible for doing that, you kind of.

Leonardo Magela Cunha

Know how to do it?

Leonardo Magela Cunha

But it's not ready yet.

Leonardo Magela Cunha

You would have to go through the course the new course and check if those games they are appropriate or not to the content

Leonardo Magela Cunha

So, like the work that you're gonna have now is like do a proper.

Leonardo Magela Cunha

Game type. So for example, a puzzle that really represents the challenges that you have in the NLP course and then.

Leonardo Magela Cunha

I don't like next year.

Leonardo Magela Cunha

You have to do this for ethics I don't

Leonardo Magela Cunha

You have to do this for ethics. I don't.

Leonardo Magela Cunha

And then you would have to map the ethics course to the types of games that you have, and then you may come out with saying, oh, none of these makes sense for the ethics because it doesn't allow me to do, I don't know, multiplayer interactions, let's say you.

Leonardo Magela Cunha

Want multiplayer inter

Chao-Yang Tang

OK so.

Chao-Yang Tang

So right now, maybe I should focus on only one research questions.

Leonardo Magela Cunha

Yeah, I think like can this approach of.

Leonardo Magela Cunha

Multi games work for teaching NLP concepts

fits.

Leonardo Magela Cunha

When I read your work, I may do a different suggestion of a different research question.

Leonardo Magela Cunha

That doesn't mean that what we are defining now it's like or what you define now is like completely out of it will not be touched it will and it may change until the end of the project OK

Leonardo Magela Cunha

It is still going to be associated with a user. If you want to do.

Leonardo Magela Cunha

Restore password.

Leonardo Magela Cunha

You won't be probably able to do it because you will not have an e-mail or something.
example, you may want to.

Leonardo Magela Cunha

As future work as well, not that you have to do it, but for example as instructor of the course I maybe could find a a good use to logs of the of what people are using the game and then try to OK people are always.

Leonardo Magela Cunha

Is getting this piece wrong?

Leonardo Magela Cunha

What is it wrong with the teaching of this specific piece

just save user information,

Leonardo Magela Cunha

I could offer these people like a new functionality or I could implement new things and et cetera.

Leonardo Magela Cunha

So having the data stored it, I understand that not having it stored kind of saves you.

Leonardo Magela Cunha

Time but then also having it stored doesn't really affect it much in terms of performance or in terms of

saves you.

Leonardo Magela Cunha

Time, but then also having it stored doesn't really affect it much in terms of performance or in terms of even functionalities, because you could implement like a simple.

Leonardo Magela Cunha

A simple authentication service that has a basic login and and recover password functionality that would work.
